

- › **Connection of a pyrotechnic ignition element**
- › **Up to 10 ignition elements per ignition circuit**

The Connection Adapter AKPZ2-1 is used to connect a pyrotechnical ignition device (e.g. aerosol extinguishing generator) to the ignition circuit of a Fire Detection or Extinguishing Control Panel Series BC600 or BC08. The Control Module SPZ2-1 integrated in the control panel can control two separate, individually fused and line-monitored ignition circuits.

The connection adapter ensures that the series-connected ignition devices are activated even if one ignition device is faulty or has already been activated at an earlier time.

TECHNICAL DATA

Ambient temperature	from -20 °C to 60 °C
Dimensions L × W × H	40 × 30 × 18 mm
Weight	10 g
Article number	223102
Order reference	Connection Adapter monitored Output AKPZ2-1
