

Join us in taking care of our planet

# 5" Quadra and People kit with video memo art. PL8431V for Simplebus 2 system

Single-family kit consisting of Quadra series entrance panel art. 4893M and 5" hands-free door People series entry monitor art. PL6731 for Simplebus 2 system.

The entrance panel is supplied with call buttons to expand the kit for up to 4 residences.

The system can also be expanded with additional door entry monitors and entrance panels (available to purchase separately); for further information please refer to the technical documentation.

The kit is supplied pre-programmed, ready to use and with all the accessories required to create the system.

Suitable for installation in homes, commercial premises or offices.

# Kit art. PL8431V

The kit components are supplied pre-programmed to work as a single-family setup.

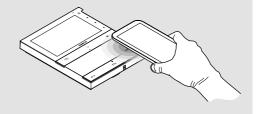

The door entry monitor has an NFC connection which means it can be programmed quickly and easily via the MyComelit app, available to download free of charge.

Programming can even take place while the door entry monitor is off!

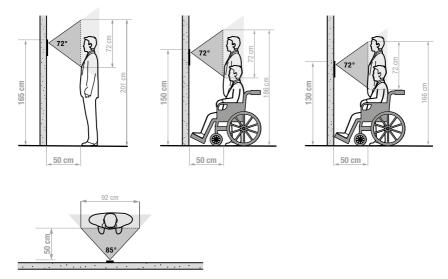

The door entry monitor can nevertheless be used to program the user code via dip-switch and customise programming using the menu.

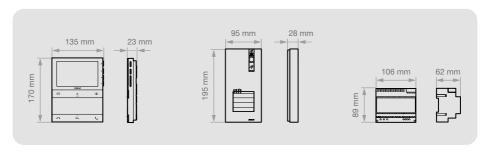

## Notes for the installer

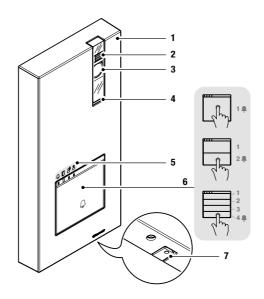

The camera must not be installed in front of light sources, or in places where the filmed subject is against the light. In dim environments, we recommend additional lighting is provided.

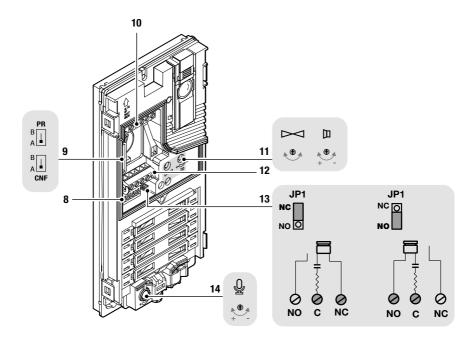

# Art. 4893M

# **Description**

Wall-mounted external unit for Quadra series door entry monitor. Die-cast aluminium front panel, wide-angle colour video camera and single LED for night-time lighting. Mechanical buttons with the option of setting 1 to 4 call buttons via DIP-switch. Indicator LED for call sent, lock-release activated, audio activated and system busy. Loudspeaker volume adjustment and audio balancing. Bus line power supply. Dimensions: 95x195x28 mm.

- 1. Die-cast aluminium cover.
- 2. Default camera lighting LED, call activated (see Entrance panel settings on page 12).
- 3. Wide-angle colour video camera.
- 4. Speaker.
- 5. Indicator LED:
  - call sent / lock-release activated audio activated system busy.
- 6. Call button 1/2/4 users.
- 7. Microphone.

- 8. **DIP-SWITCH** for function programming.
- **9. PR** programming input/output switch. **CNF** programming confirmation switch.
- 10. Terminal block M1:

LL bus line connection.

RTE request to exit button input.

**COM** common input for RTE and DO contacts.

**DO** door open indication input.

- 11. Audio balancing and loudspeaker volume adjustment.
- 12. Terminal block M2:

SE- SE+ connection for electric door lock.

NC NO C relay contacts.

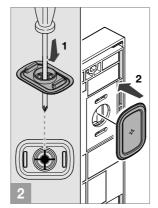

- 13. JP1 enabling the RC network for door lock filter on relay contacts.
- 14. Microphone volume control.

## Installation

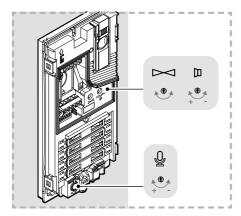

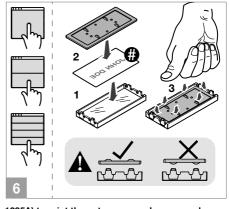

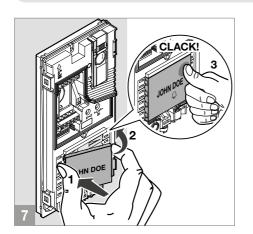

**(** 

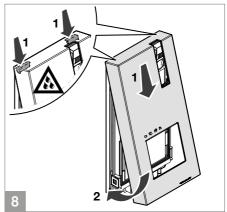

You can download the free software (art. 1235A) to print the entrance panel name cards, using the adhesive pre-cut sheets available in our catalogue (art. 1217A).

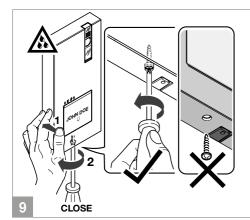

Before securing the screw, make sure that you do not need to program the external unit and make sure that the metal front panel does not rub against other metal parts, with consequent risk of damage to its insulating coating.

While the system is running, take care not to accidentally call users when replacing the nameplate labels.

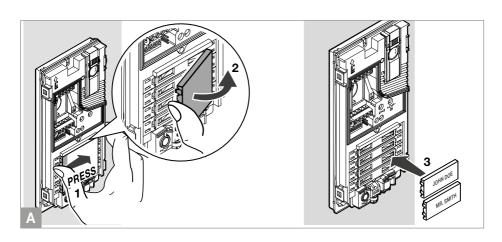

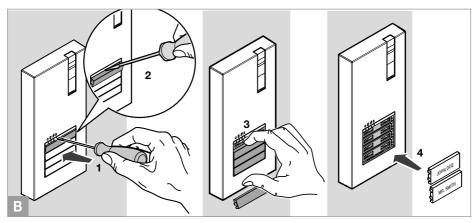

To guarantee the product is water-tight: fit it properly.

# **CHANGING NAMEPLATES**

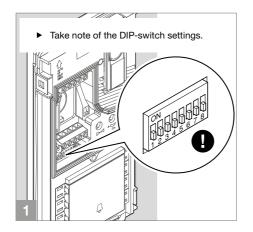

# **Programming**

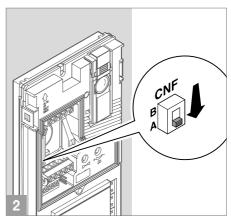

#### **ENTRANCE PANEL SETTINGS**

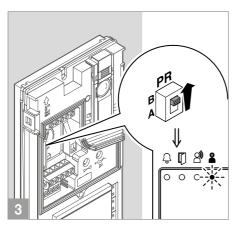

► Permanently set the S1 DIP-switches corresponding to the function you want to program in accordance with the table below (you do not need to enter programming mode)

			FUNCTION
DIP 1	ON T		The SE output and the C-NO relay are controlled by 2 separate buttons on the door entry monitor: the key button (SE) and the generic actuator button (C-NO)
	ON	default	The SE output and the C-NO relay are controlled by a single button on the door entry monitor: the key button
DIP 2	ON 		Lock-release activation time: 8 seconds
	ON	default	Lock-release activation time: 2 seconds
DIP 3	ON 		Relay activation time: 8 seconds
	ON 	default	Relay activation time: 2 seconds
DIP 4	ON 		Awaiting reset time: 1 second
DIP 4	ON 	default	Awaiting reset time: 10 seconds
DIP 5	ON :		Call transmission: TRIPLE
DIP 5	ON 	default	Call transmission: SINGLE
DIP 6	ON 		Confirmation tones (call, lock-release, relay, audio enabled): DISABLED
	ON 	default	Confirmation tones (call, lock-release, relay, audio enabled): ENABLED
DIP 7	ON 		Camera lighting LED: DISABLED
	ON 	default	Camera lighting LED: ENABLED
DIP 8	ON 		LED lighting of name-holder front panels: OFF
	ON	default	LED lighting of name-holder front panels: ON

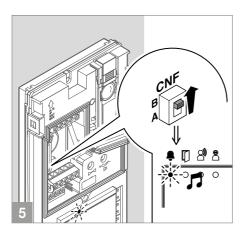

#### PROGRAMMING CALL CODES FOR TWO-FAMILY AND FOUR-FAMILY VERSION

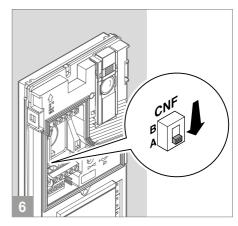

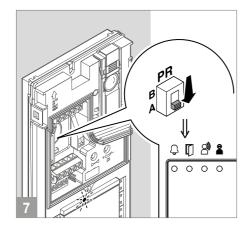

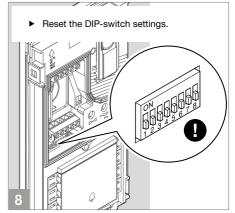

#### PROGRAMMING AN ADDITIONAL ENTRANCE PANEL

With switching device art. 1405, only one additional entrance panel may be installed.

Program the entrance panel as **Main** Por **Secondary** S:

- The Main entrance panel carries out lock-release (or actuator) commands only when it is in call or selfignition mode.
- The Secondary entrance panel carries out lock-release (or actuator) commands whether it is in standby or in call or self-ignition mode.
- If the system is in standby mode the first self-ignition command will activate the camera of the secondary
  entrance panel. Further commands switch between the two entrance panels, activating the main entrance
  panel and the secondary entrance panel alternately.

With switching device art. 1404 (default), more than one additional entrance panel may be installed.

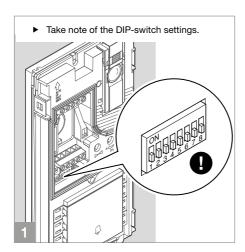

In the configuration of art. 1404, MIN and MAX DIP-switches respectively define the lowest and highest user codes which can be connected to the riser. For information on setting the desired values, refer to <a href="Table of user">Table of user</a> codes on page 58.

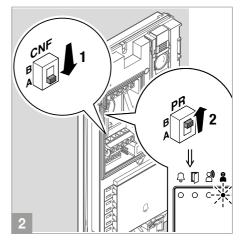

Separate switching devices for different risers must manage code ranges which are not overlapping.

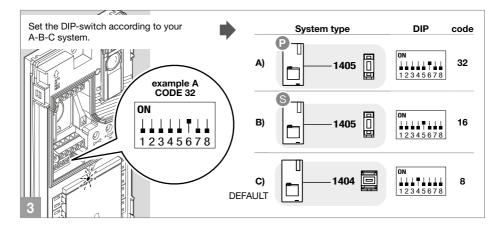

When the system is in standby mode, the first self-ignition command activates the camera of the entrance panel connected to the LS LS terminals. Further transmissions enable the toggle function between (max.) 2 entrance panels, activating them in turn.

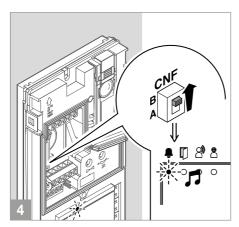

Please refer to the <u>full manual</u> for product 1404, which is available to download from the website **pro. comelitgroup.com** 

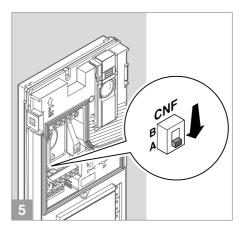

All the entrance panels must be programmed as shown below:

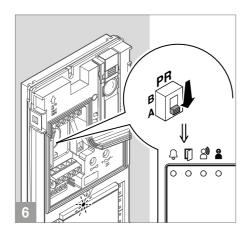

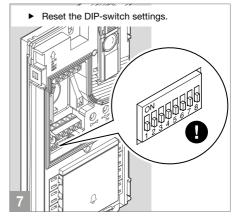

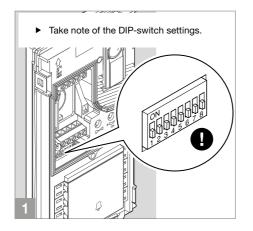

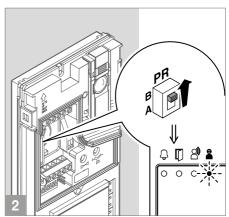

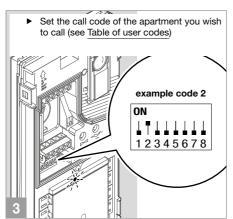

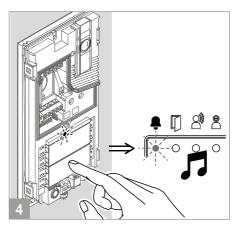

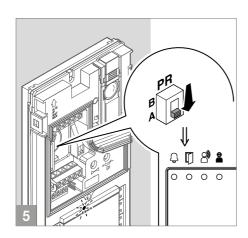

#### PROGRAMMING THE DESIRED CALL ADDRESS

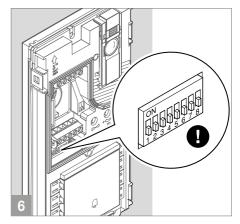

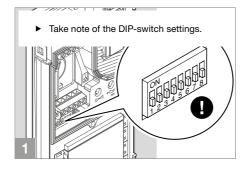

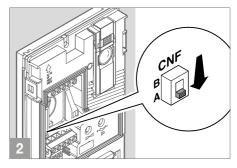

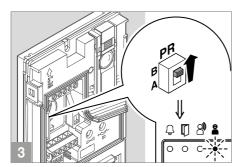

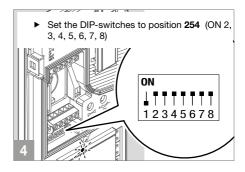

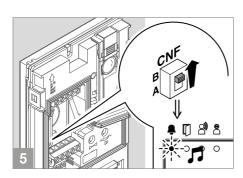

## **RESTORE DEFAULT**

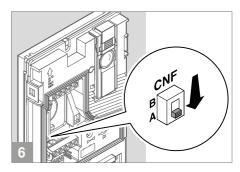

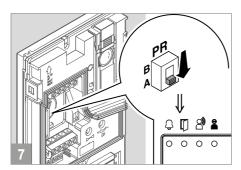

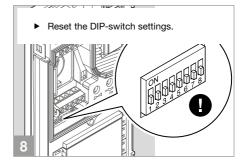

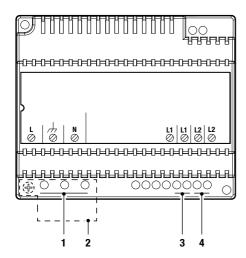

# Art. 1209

## Description

33 VDC power supply unit for Simplebus 2 KIT, for direct connection to the external unit and internal unit. Equipped with overload and short circuit protection. Input voltage 110-240 VAC. Dimensions: 106 x 62 x 89 mm (6 DIN modules).

- 1. L=N mains power input 110-240 V~.
- 2. Terminal protection.
- 3. L1 L1 main bus line output (31 V ---).
- 4. L2 L2 riser bus line input (31 V ---).

Appliance exclusively for indoor use. Risk of electric shock; proceed with caution. Install inside a closed electrical panel so that it may only be accessed by authorised personnel.

A suitable omnipolar switch with a contact opening of at least 3 mm must be installed upstream of the video entry phone system.

- . Disconnect the power supply before carrying out any operations on the wiring.
- . Replace the protections on the terminals.
- . Do not obstruct the ventilation and cooling slots or apertures.

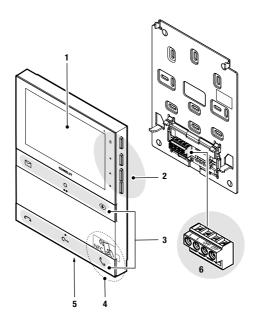

# **Technical specifications**

Maximum power delivered (W) 37

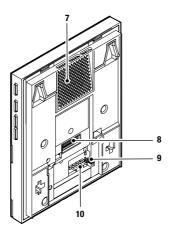

# Art. PL6731

## Description

People series colour door entry monitor for Simplebus 2 system. Hands-free version with 5" / 16:9 screen. The door entry monitor can be programmed, even when switched off, via smartphone using the MyComelit app, which is available to download free of charge. It is supplied with a metal surface mounting backplate for stable and strong fixing, and with a line distribution terminal. It has 6 mechanical buttons on the front, with icons identifying their factory set functions. 3 of the buttons are backlit to ensure ease of use: green for the 'audio' function, red for the 'end communication' function, and white for the 'electric lock' function. 3 buttons are programmable and pre-configured to display images from the video memory, to control an actuator, and to perform self activation. The middle buttons of each row have touch guides for sight-impaired users. On the right-hand side of the door entry monitor there are buttons for activating Silent mode with a red indicator light and corresponding icon, plus buttons for accessing the menu used to adjust the brightness, contrast, colour and ringtone volume values. It comes as standard with a floor door call that can also be programmed for other functions. Dimensions (L x H x D): 135 x 170 x 23 mm.

- 1. 5" / 16:9 LCD screen.
- 2. Mechanical side buttons.
- 3. Mechanical front buttons, with touch guides for sight impaired users on the middle buttons of each row.
- 4. NFC detection area, identified by a removable sticker.
- 5. Microphone.
- 6. Connection terminal block:
  - L L Terminals for bus line connection.
  - CFP CFP Terminals for floor door call connection.

- 7. Speaker.
- 8. Dip-switch for programming the user code.
- 9. CV5 Jumper for video closure.
- 10. Pin for securing the terminal block.

#### FRONT BUTTONS - FACTORY PROGRAMMING

#### Video memo ★

Press the button to view the recorded video.

#### Generic actuator \*

 Press the button to activate a generic actuator (art. 1256) or the relay for the external entrance panel.

#### Self-activation ★

 Press the button to access real-time viewing of the images on the external entrance panel camera.

#### **End of communication**

Press the button to end the audio communication.

#### Lock-release ★

Press the button to activate the door lock.

#### Automatic lock-release on receipt of call

This button can also be used to enable "Auto lock-release on receipt of call", which allows automatic activation of the lock-release relay on receipt of a call originating from the external entrance panel.

- $\sqrt{\ }$  The function must be authorised by the installer using the MyComelit app or via the installer menu on the door entry monitor.
- When the door entry monitor is in standby, press C for 5 seconds to enable/disable "Automatic lock-release on receipt of call" mode.
  - » A confirmation tone will play.
  - » The text "AUTO LOCK-RELEASE ACTIVATED/DEACTIVATED" appears on the door entry monitor display for 3 seconds.
  - » The steadily lit LED C— indicates that the function is active.

#### Start communication (speech button)

Press the button to activate communication.

#### Automatic answer

This button can also be used to enable "Automatic answer", which allows automatic activation of the audio on receipt of a call originating from the external entrance panel.

- The function must be authorised by the installer using the MyComelit app or via the installer menu on the door entry monitor.
- When the door entry monitor is in standby, press \$\infty\$ for 5 seconds to enable/disable "Automatic answer" mode.
  - » A confirmation tone will play.
  - » The text "AUTOMATIC ANSWER ACTIVATED/DEACTIVATED" appears on the door entry monitor display for 3 seconds.
  - » The steadily lit LED \( \), indicates that the function is active.

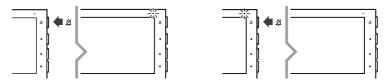

★ To change the factory programming for the buttons, please refer to the chapter Programming the door entry monitor on page 36.

#### SIDE BUTTONS

#### ACTIVATING "SILENT MODE"

- ▶ Press **¼** to activate/deactivate **Silent mode**.
- » The red LED indicates that the function is active.

#### ACCESSING AND NAVIGATING MENUS

▶ Press one of the following buttons to access the user menu.

#### CAUTION

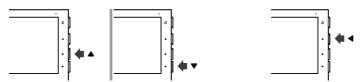

If the red LED flashes 4 times, this means that the system is busy and that the user menu cannot be accessed at this time.

#### CAUTION

If the icon appears while you are navigating the user menu and the door entry monitor switches off, this means that the system is busy and you cannot navigate the user menu at this time.

Press ▲ and ▼ to scroll through the menu and/or select the values, then press ◀ to confirm the selection.

## Programming the user code

The door entry monitor included in the kit is pre-programmed with user code 1.

The user code must be programmed on any additional door entry monitors via the MyComelit app or using the dip-switches.

#### PROGRAMMING THE USER CODE VIA THE MYCOMELIT APP

The door entry monitor has an NFC connection which means it can be programmed quickly and easily **via the MyComelit app**, available to download free of charge.

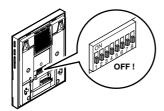

Programming can even take place while the door entry monitor is off!

The user code for several door entry monitors can be programmed in sequence!

To program the user code using the MyComelit App, follow the procedure shown in this video tutorial or read the following instructions carefully.

All dip-switches must be set to OFF (factory programming) and should remain OFF even during normal operation.

- 1. Open the MyComelit app and log in (or create a new account if it is the first time you have accessed it).
- 2. Select "PEOPLE DOOR ENTRY MONITORS SETUP".

3. Enter the desired user code and press "WRITE".

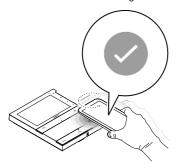

4. Bring your smartphone close to the NFC detection area of the door entry monitor (identified by its label) and make a circular motion until you feel it vibrate.

The vibration indicates that writing is taking place. Hold your smartphone in place until the procedure is complete.

» A tick indicates that writing was successful.

**5.A** Press "END" to end the user code programming procedure on the door entry monitor.

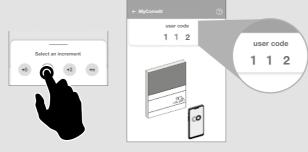

#### OR

if you want to program the user codes for other door entry monitors in sequence:

#### 5.B Press "CONTINUE".

6.B Select the desired increment interval.

7.B Bring your smartphone close to the NFC detection area of the new door entry monitor (identified by its label) and make a circular motion until you feel it vibrate.

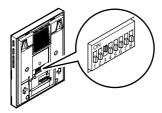

The vibration indicates that writing is taking place. Hold your smartphone in place until the procedure is complete.

» A tick indicates that writing was successful.

8.B Repeat step 7.B for each door entry monitor on which you want to program the user code.

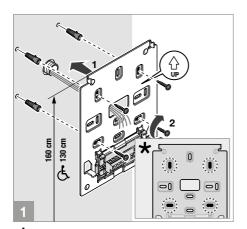

## PROGRAMMING THE USER CODE USING THE DIP-SWITCHES

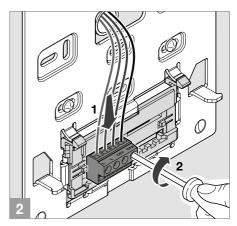

► Set the DIP-switches to **ON** to program a user code on the door entry monitor, as per <u>Table of</u> user codes.

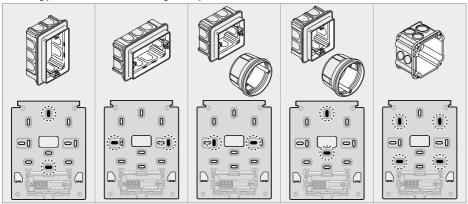

Example: code 4.

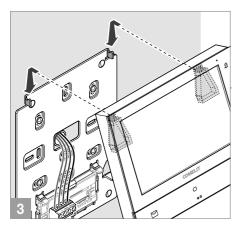

# Installation

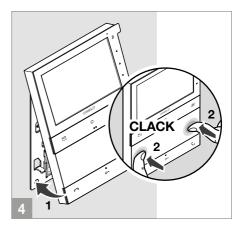

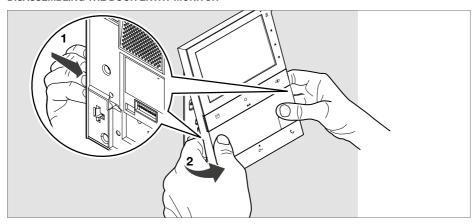

★ Fixing points for use when installing in compatible boxes

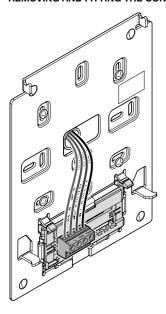

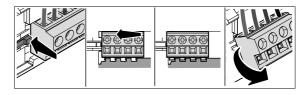

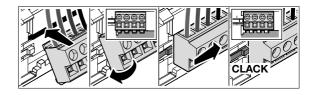

## DISASSEMBLING THE DOOR ENTRY MONITOR

## REMOVING AND FITTING THE CONNECTION TERMINALS

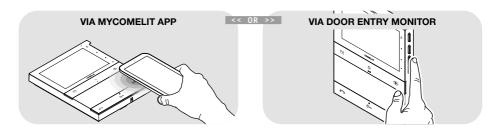

# Programming the door entry monitor

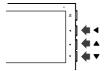

The programming can be customised:

- Using the MyComelit app via a smartphone
- Using the installer menu on the door entry monitor

#### PROGRAMMING VIA INSTALLER MENU

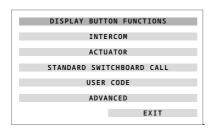

- The first time the door entry monitor is switched on, you will need to configure the device language; you will also be able to set the date and time if necessary.
- 1. Press one of the following buttons to access the user menu.

2. Press▲ and ▼ for 5 sec to access the installer menu.

» A confirmation tone will sound and the following screen will appear.

#### CAUTION

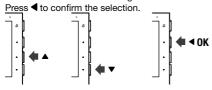

If the red LED flashes 4 times, this means that the system is busy and that the user/installer menu cannot be accessed at this time.

#### CAUTION

If the icon appears while you are navigating the user menu and the door entry monitor switches off, this means that the system is busy and you cannot navigate the user/installer menu at this time.

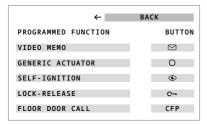

3. Press ▲ and ▼ to scroll through the menu and/or select the values.

- » When the element is selected, the text will turn green.
- 4. To exit the installer menu, select EXIT or wait for 2 minutes (time-out period) without doing anything.

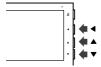

#### DISPLAY BUTTON FUNCTIONS MENU

By selecting this menu, the functions currently assigned to the buttons on the door entry monitor are displayed. The factory-set functions are as follows:

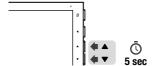

#### EXAMPLE: PROGRAMMING THE INTERCOM FUNCTION TO OTHER APARTMENT

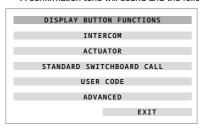

1. Press one of the following buttons to access the user menu.

2. Press▲ and ▼ for 5 sec to access the installer menu.

» A confirmation tone will sound and the following screen will appear.

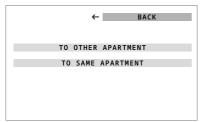

- 3. Press ▼ to select the INTERCOM function
  - » The menu will turn green.

4. Press the confirm button.

» The following window will appear.

- 5. Press ▼ to select TO OTHER APARTMENT.
  - » The menu will turn green.

6. Press the confirm button.

- 7. Press ▼ to select the number you want to change.
  - » The checkbox will turn green.

8. Press the confirm button.

» Two arrows will appear to indicate the number that can be changed.

9. Use ▲ and ▼ to set the desired value (example: [3]).

10. Press the confirm button.

- 11. Press ▼ to select CONFIRM.
  - » The menu will turn green.

12. Press the confirm button.

13. Press the button to be associated with the function.

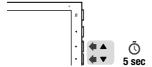

If  $\square$  is configured to activate another function, the MyComelit app should be used to restore the video memo function.

#### EXAMPLE: PROGRAMMING THE INTERCOM FUNCTION TO SAME APARTMENT

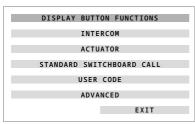

1. Press one of the following buttons to access the user menu.

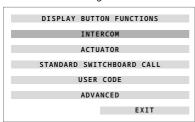

2. Press▲ and ▼ for 5 sec to access the installer menu.

» A confirmation tone will sound and the following screen will appear.

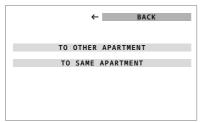

- 3. Press ▼ to select the INTERCOM function
  - » The menu will turn green.

4. Press the confirm button.

» The following window will appear.

- 5. Press ▼ to select TO SAME APARTMENT.
  - » The menu will turn green.

6. Press the confirm button.

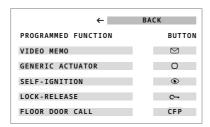

- 7. Press the button to be associated with the function.
  - If  $\begin{tabular}{l} \end{tabular}$  is configured to activate another function, the MyComelit app should be used to restore the video memo function.

#### INSTALLER MENU NAVIGATION TREE

#### PROGRAMMING VIA MYCOMELIT APP

- √ Update the MyComelit App to the latest available version.
- V ONLY if programming the user code via the app, all dip-switches must be set to OFF (factory programming) and should remain OFF even during normal operation.
- If the user code is programmed via dip-switch (and therefore the dip-switches are not all set to OFF), the other door entry monitor functions can still be programmed using the MyComelit App (with the exception of the user code).

The MyComelit app can be used to program the door entry monitor quickly and easily, even while it is switched off

When the MyComelit app is used to configure the door entry monitor, the language, date and time are set automatically.

The MyComelit app makes it possible to:

- Read all door entry monitor programming.
- Edit and rewrite the programming.
- Create programming offline, save it to your smartphone and then write it on the door entry monitor later.
- Create and save your favourite programming to your smartphone.
- Increase the user code by a configurable value to allow the programming of door entry monitors in sequence.
- Copy the programming of one door entry monitor to another door entry monitor.
- Share the door entry monitor programming with other users (via WhatsApp, etc.) to facilitate technical support.
- ...

In addition to these functions, the MyComelit app can also be used for the following functions:

- To program the user code (only if it has not been programmed using the DIP-switches, see <a href="Programming">Programming</a> the user code via the MyComelit app on page 30).
- To program the functions to be associated with the buttons.
- To program the door entry monitor as main/secondary (see Main and Secondary Door Entry Monitor on page 48).
- · To change the ringtones for:
  - · Call from external entrance panel.
  - · Floor door call (CFP).
  - · Call from switchboard.
  - · Intercom call.
  - · Call with range.
- To change the functions associated with the CFP input (see <u>Functions associated with the CFP input on page 49</u>).
- To program the following functions:
  - Intercom (see Intercom on page 48).
  - Selective intercom (see Selective intercom on page 48).
  - Selective group intercom (see Selective group intercom on page 48).
- To authorise the user to utilise the following functions:
  - "Door opening upon call" (see Automatic lock-release on receipt of call on page 23).
  - · "Automatic answer" (see Automatic answer on page 23).
- To program the minimum and maximum call codes for the call range function (see Call range on page 49).

- To disable the user and/or installer menu on the door entry monitor.
- Disable the "Silent Mode" button or select the ringtones to silence.
- To restore the door entry monitor to its factory programming.

#### MAIN AND SECONDARY DOOR ENTRY MONITOR

In systems with power supply unit art. **1210/1210A**, one main door entry monitor and 3 secondary door entry monitors can be programmed for each apartment.

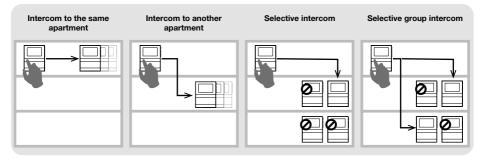

In systems with power supply unit art. **4888C**, 2 main door entry monitors and 2 secondary door entry monitors can be programmed for each apartment.

On receipt of a call from the entrance panel:

- » All door entry monitors ring.
- » The image from the entrance panel appears automatically on the main door entry monitor. Any other secondary door entry monitors in the same family unit will remain off.
- » Video can be requested on the secondary door entry monitor(s) (without answering the call) by pressing the button programmed for self activation (factory set as button ♥) or by pressing "Start communication" ♥.

#### INTERCOM FUNCTION

Various types of intercom call can be programmed:

#### INTERCOM

- · intercom call to the same apartment
  - Program the INTERCOM TO SAME APARTMENT function to the chosen button in order to call ALL the door entry monitors in the same apartment.
- · intercom call to another apartment
  - Program the [INTERCOM TO OTHER APARTMENT function to the chosen button in order to call ALL the
    door entry monitors in that apartment.

#### SELECTIVE INTERCOM

#### Selective intercom

▶ This is an intercom call to a single door entry monitor in the same apartment or another apartment identified by a dedicated intercom code, different from the user code. ONLY that door entry monitor will be called. The intercom code can be programmed from 1 to 8. The same intercom code can be associated with up to 3 door entry monitors.

NOTE: if even a single user programs this function, the intercom code must be programmed on all door entry monitors on the riser, even if they do not use the function!

- 1. Program the INTERCOM CODE on the door entry monitor you want to call.
- On the desired button, program the SELECTIVE INTERCOM function for the INTERCOM CODE of the door entry monitor you want to call.

#### · Selective group intercom

This is an intercom call to groups of several door entry monitors in the same apartment or another apartment identified by a dedicated intercom code, different from the user code. The door entry monitor button can be programmed with up to 3 different intercom codes to which the call will be made at once.

The maximum number of door entry monitors which can ring simultaneously nevertheless remains 3.

- 1. Program the INTERCOM CODE on the door entry monitors you want to call.
- On the desired button, program the SELECTIVE GROUP INTERCOM function for the intercom codes of the door entry monitors you want to call.

#### NOTE:

intercom and selective intercom CANNOT be programmed in the same system!

#### **FUNCTIONS ASSOCIATED WITH THE CFP INPUT**

In addition to the floor door call, other functions can be associated with the CFP input (CFP and CFP terminals):

- Control of a generic actuator or with a code.
- · Panic call (priority call to porter switchboard).
- · Remote control of lock-release command.

#### **CALL RANGE**

The door entry monitor can be programmed to receive calls originating from the external entrance panel and direct calls, to both your own user code and an interval (range) of user codes.

#### Example:

If the door entry monitor is programmed with user code "1" and the range of user codes from 5 to 7 is also programmed, when the function is enabled it will receive both direct calls to user code "1" and direct calls to user codes 5, 6 and 7.

The user can only activate/deactivate the range of user codes if they have been authorised to do so by the installer, using the MyComelit app or via the installer menu on the door entry monitor.

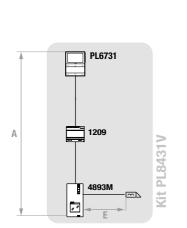

#### Range activation:

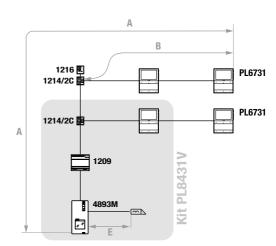

- ▶ Press and hold buttons ← and ∩ together for 5 seconds.
  - » A confirmation tone will play.
  - » The text "CALL RANGE ACTIVATED" appears on the door entry monitor display for 3 seconds.
  - » The  $m{m{\varnothing}}$  I FD flashes to indicate that the function is active.

#### Range deactivation:

- - » A confirmation tone will play.
  - » The text "CALL RANGE DEACTIVATED" appears on the door entry monitor display for 3 seconds.
  - » The # LED switches off.

\* Max. 20 m. Local door-opener button.

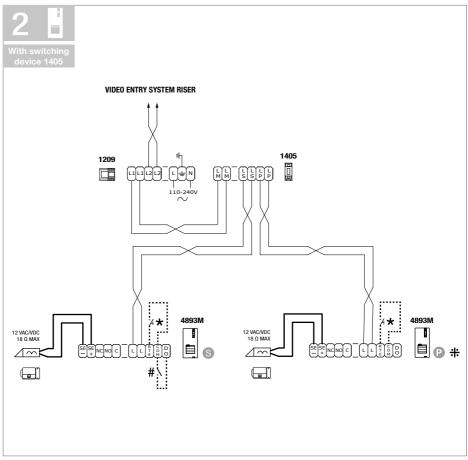

\* Max. 20 m. Local door-opener button.

## System expansion diagrams

- S In systems with power supply unit art. 1209, a maximum of 1 main door entry monitor (P) and 3 secondary door entry monitors (S) can be programmed for each apartment.
  To program the door entry monitor as secondary, use the MyComelit app via NFC.
- CFP floor door call input. Where multiple door-entry phones or door entry monitors have the same user code, connect the CFP button on one only; all the devices will ring simultaneously.

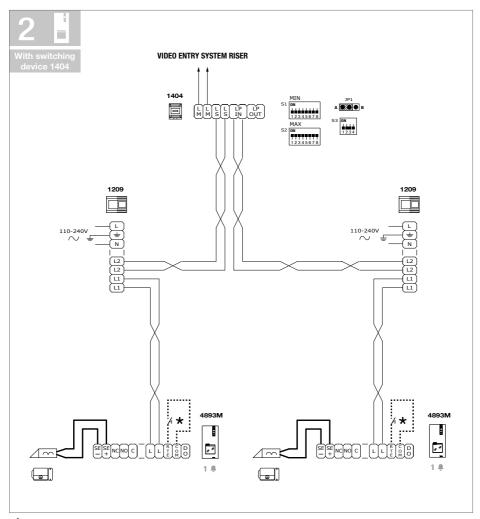

- PS To program the entrance panel as **Main** or **Secondary**, refer to <u>Programming an additional entrance panel on</u> page 15.
- \* Max. 20 m. Local door-opener button.
- # N.C. contact for door open indication.
- Door open indication not available.

By using the switching device 1405, you can add only one entrance panel to the kit.

The entrance panel does not require an additional power supply unit.

The two entrance panels must be programmed as Main and Secondary.

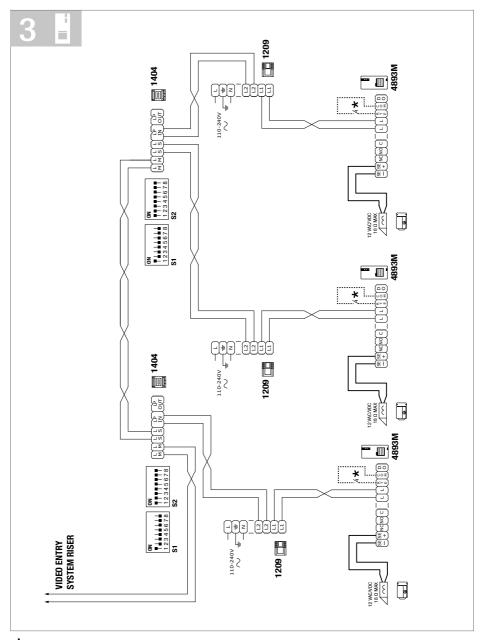

\* Max. 20 m. Local door-opener button.

The Door open indication function is **not** available.

By using the switching device 1404, you can add one or more entrance panels to the kit.

The entrance panel requires an additional power supply unit.

The entrance panels must not be programmed as Main and Secondary.

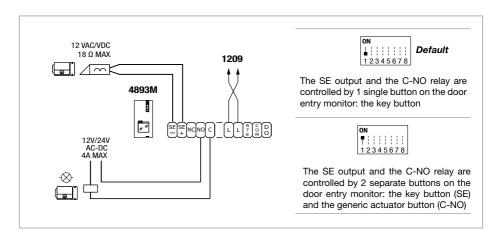

\* Max. 20 m. Local door-opener button.

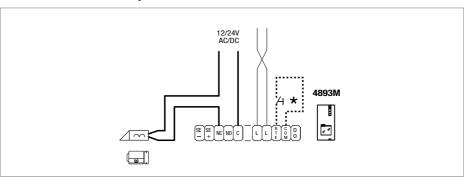

The door open indication function is not available. The self-activation function is available (with toggle function between 2 external units).

## Using the entrance panel relay on generic actuator control

Relay activation time C.NC.NO: 2 sec. (default)

### Variant with use of safety door lock

\* Max. 20 m. Local door-opener button.
