ONE

One like no one.

The only home automation device that can truly do everything.

One like no one.
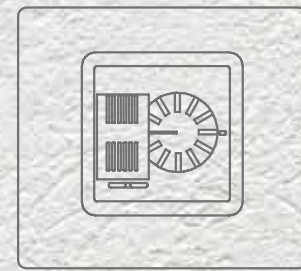

To be one of a kind.
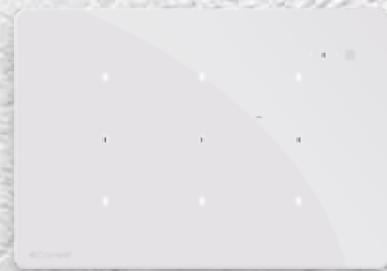

One is the device revolutionising the world of home automation management. Patent Pending.
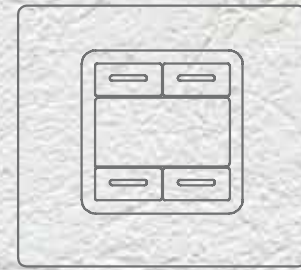

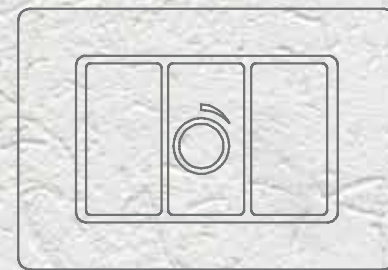

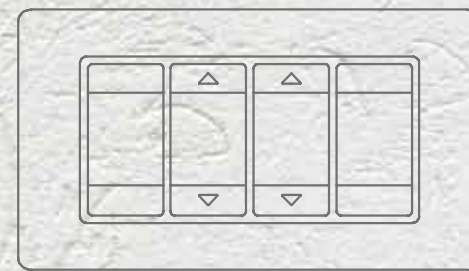

The only non-specialist multi-purpose cover plate capable of diversifying over time.

A single touch-sensitive point of control with a multi-page system manages lights, climate control, automations and scenarios.

Minimal design with various colour finishes.

Greater security, greater wellbeing, greater peace-of-mind: the first product designed to offer so much.

The only home automation device that can truly do everything.
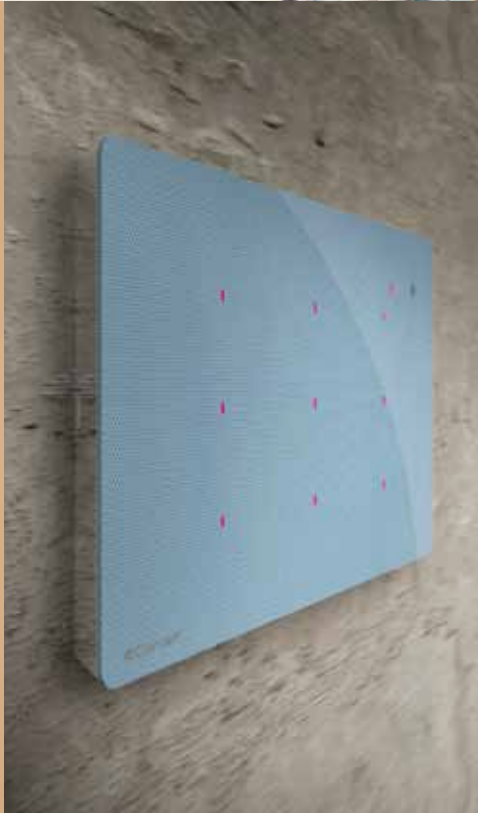

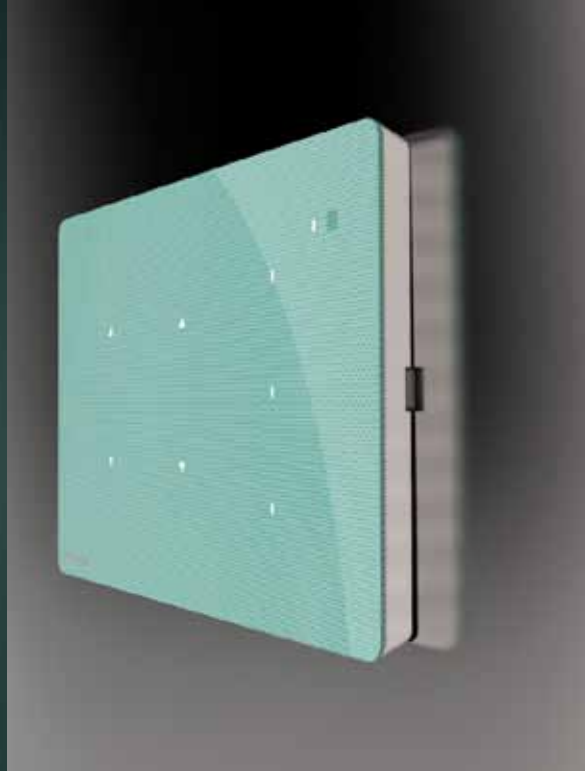

One reflects your style and the way you live in your home. Versatility you may not have expected. Surprising freedom when it comes to programming. An almost infinite range of possible combinations. A unique ability to diversify over time, by changing, removing or adding functions. Total customisation of the LED backlighting colour.

One for every one.

Simplicity in its purest form.

One features a clean and simple design, without any superfluous details.

Its shiny surface is made using transparent scratch-resistant polycarbonate. Sleek shape with smooth corners.
The chrome-plated trim reflects the finish of the wall and makes the unit seem thinner, as it almost melts into the wall on which it is mounted.
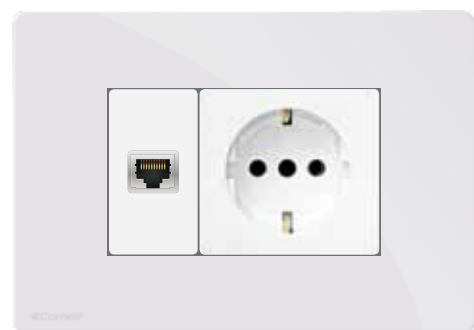

A an ultra-thin minimalist shape, researched down to the very last millimetre, encases complex technology.

With One, your wall is a thing of beauty.

Colour as an expression of style and identity.

One is available in white and ten other colour finishes.

Shades chosen for their ability to adapt to the materials and styles used in modern architecture. The frames to match One, made using the same material and in the same shades, are compatible with the bestselling civil series products.

All in One. The only
Multi-Purpose
device. A whole
universe in a single
product.

light colour and intensity
control - rgb
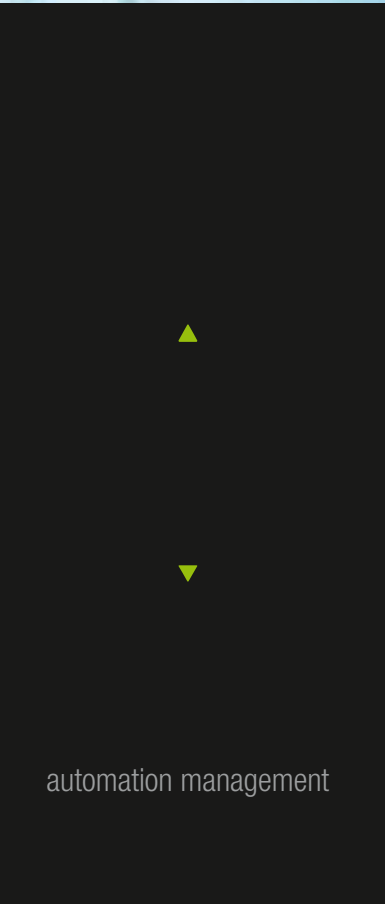

automation management

gestione scenari
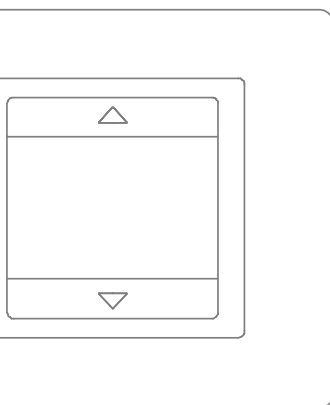

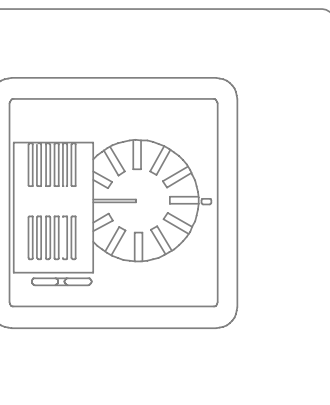

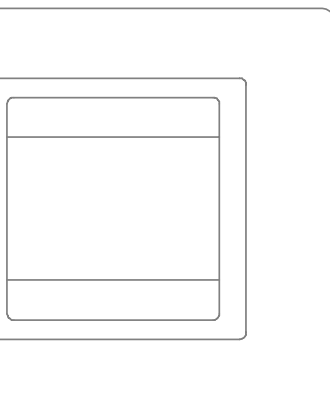

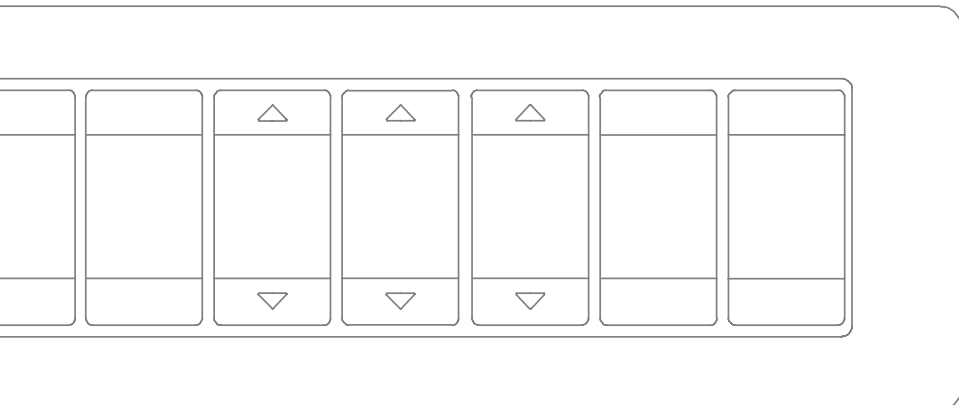

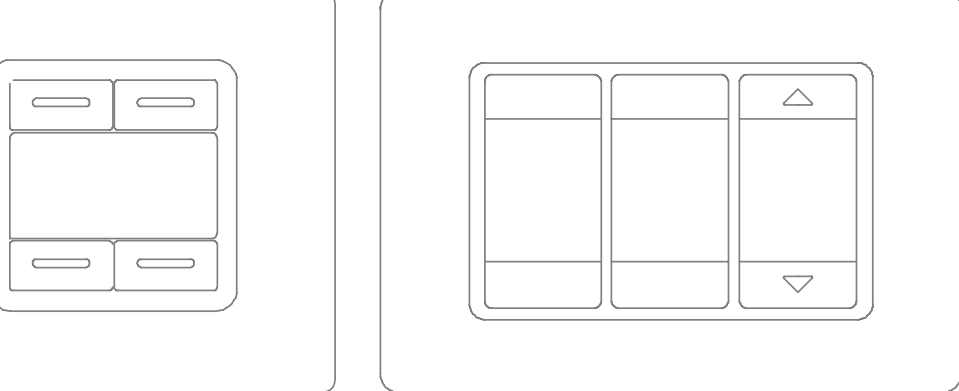

"Mono"...

The traditional and standard technology used in civil series requires the application of specific devices which respond individually to the different requirements: light management, rgb, dimmers, automations, climate and scenarios.
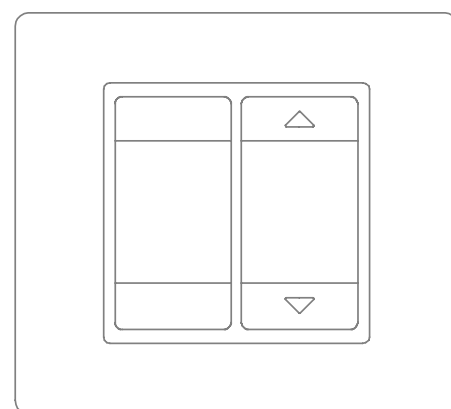

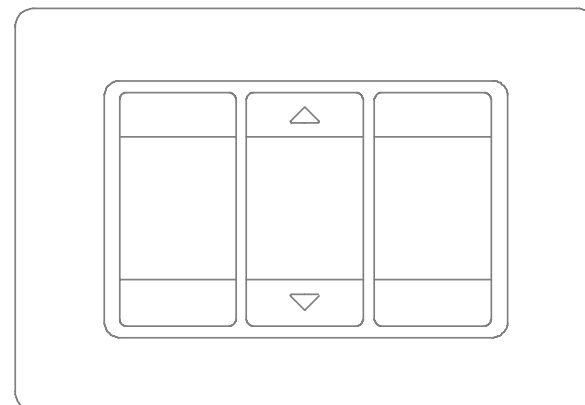

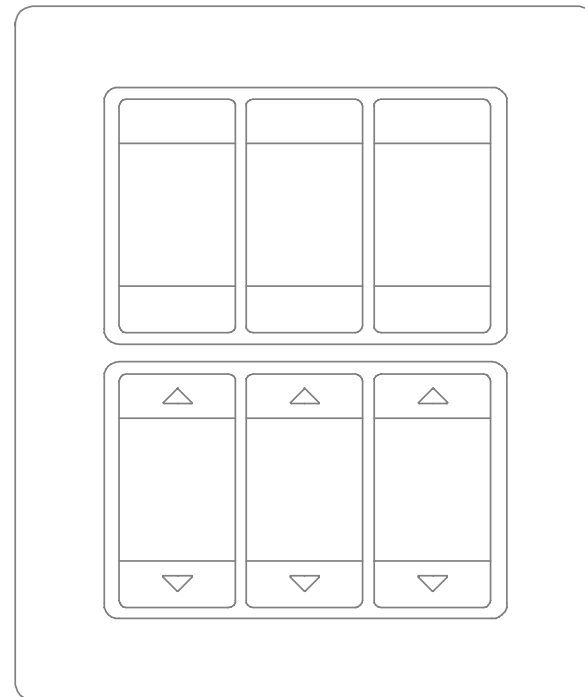

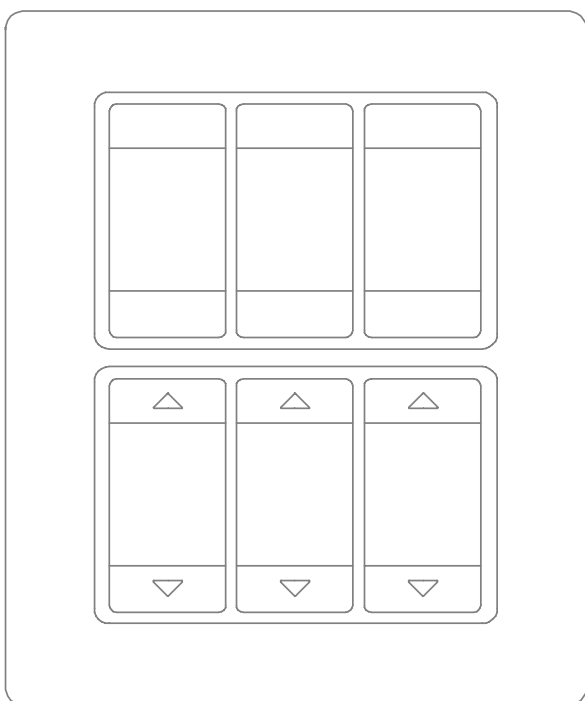

One, the only one Multi.

What is a multi-purpose device?
Comelit One (Patent Pending) is the only multi-purpose device on the market. It was created as a non-specialist product, as you only have to decide what to control during programming: one or more lights (including dimmer and rgb technology), one or more automations, one zone thermostat, one or more scenarios or even the complete set of all functions.

One allows unprecedented customisation: during programming you can customise the number of screens (up to 3), functions and the colour of each LED.
The controls can also be assigned as desired on various screens, to create a logical order and a unique, absorbing user experience.

Everything in a touch.
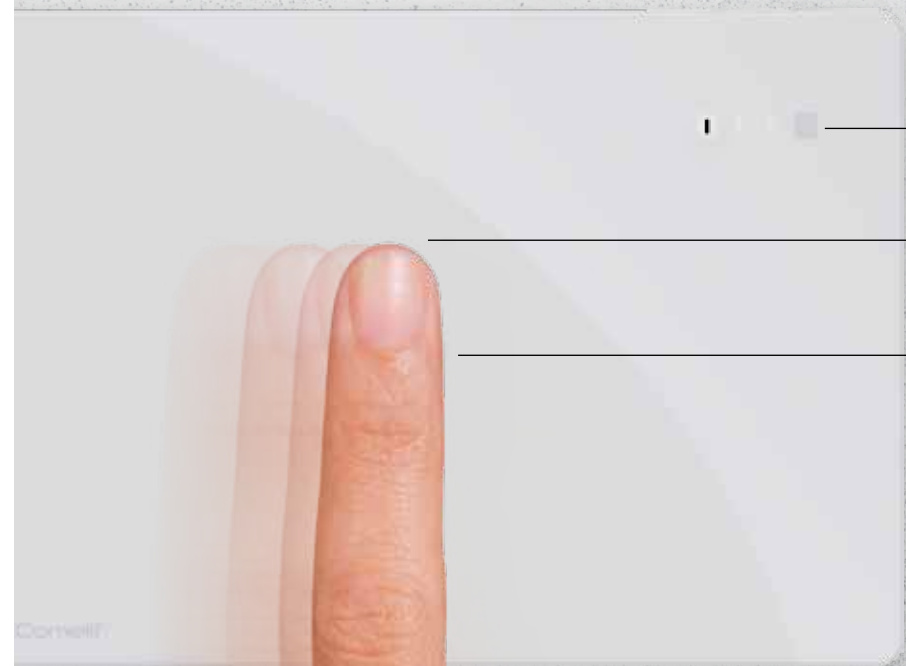

One.
The only cover plate that recognises every one of your actions.

Scrolling, to change screen.

Pressing, to activate a command.

Pressing and holding, to access special screens.

One is the first touch-sensitive home automation control device.

Scrolling, to change screen. Pressing, to activate a command. Pressing and holding, to access special screens. No other cover plate in the world has been designed to recognise every one of your actions.

Three screens, up to 7 controllable functions including light activation and intensity adjustment, rolling shutter automation and temperature / scenario management.
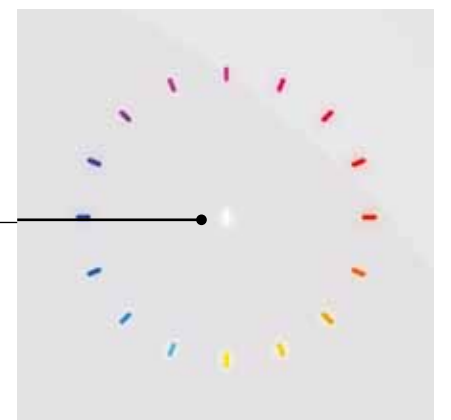

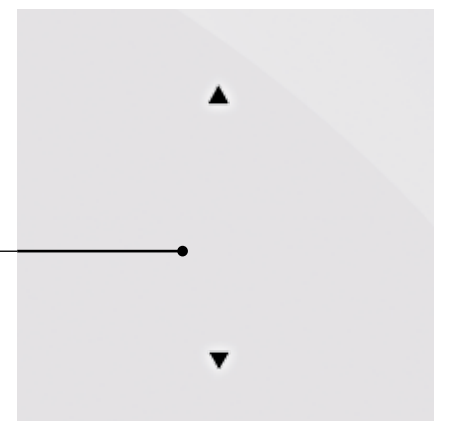

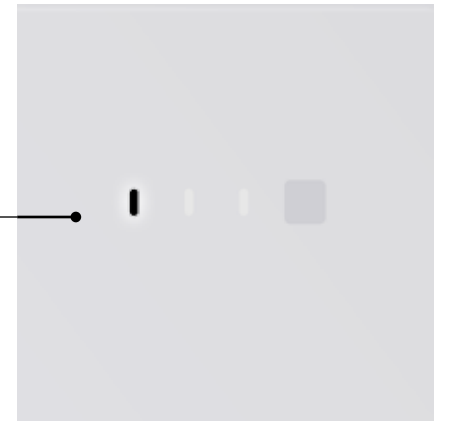

The Thousand...
and One light.

One controls up to 27 lighting points.

9 per screen, with various configurations. To switch a lighting point on or off, simply press lightly.

You can adjust the intensity of each light: press and hold the relevant point on the device to access the circular slider for the special Dimmer function.

You can use the special RGB management function to change the colour of the ambient lighting while adjusting its intensity.
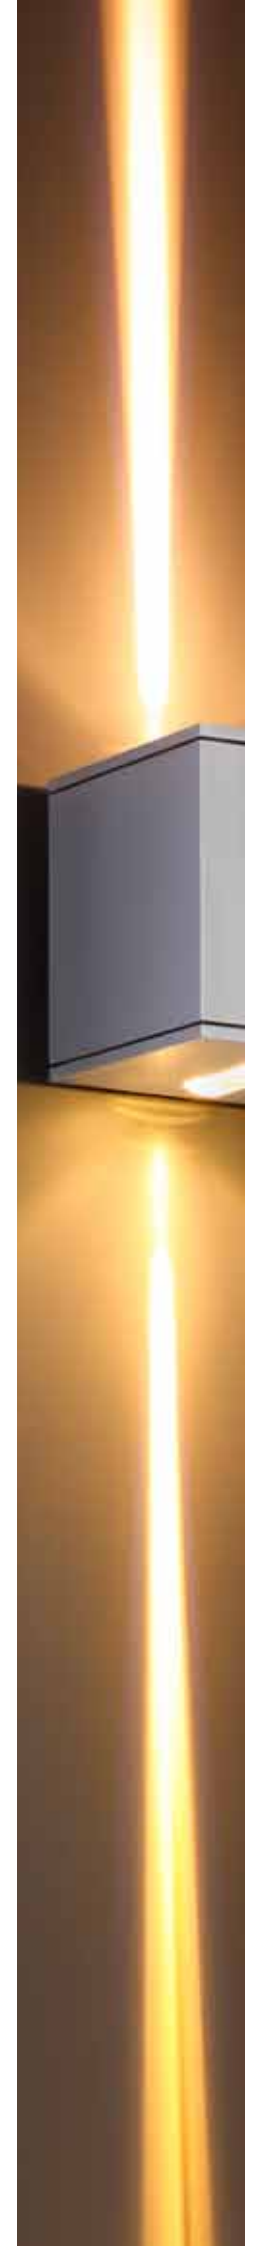

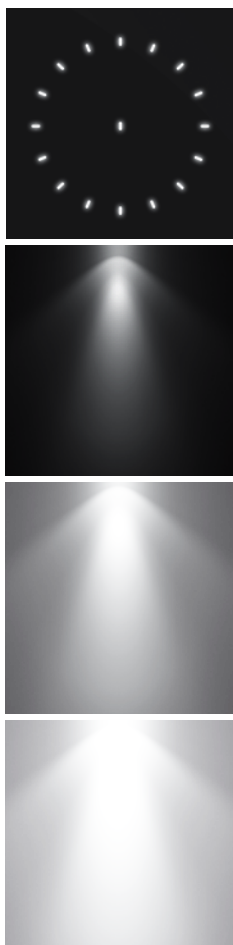

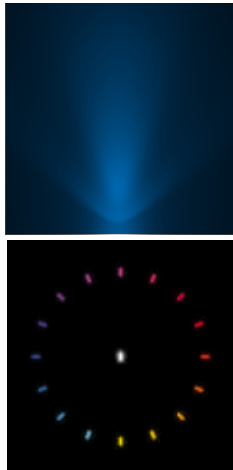

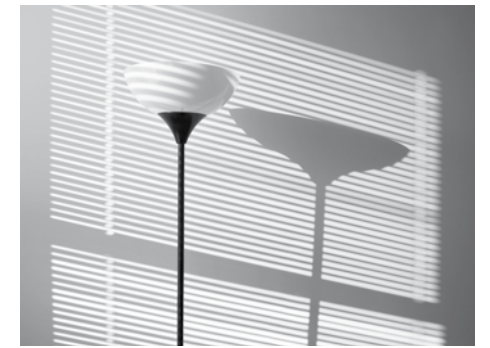

Keep pressing,
keep control.

One controls up to 9 automations.

A single point of control and a light pressure is all you need to raise and lower shutters, Venetian blinds and sun awnings, inside or outside the house.

Information is returned in real time: colour changes and sound feedback confirm that commands have been executed, which means that checking every single door or window is no longer necessary.

The ideal climate
is the one you are in.
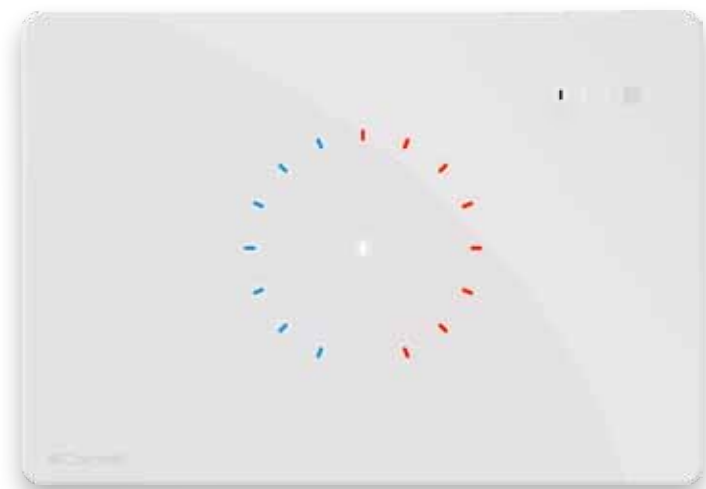

Press and hold to access the special Climate screen: swipe your finger over the circular slider to increase or decrease the temperature by 3°C.

A feedback LED indicates whether the heating/cooling system is working.

The Climate function makes your home even more comfortable: a simple action and a few seconds is all you need to adjust the climate in a room, without using the timer-thermostat or the home automation supervisor.

3°C

3°C

You are the One.

One adapts to suit your style.

Each LED can be customised with a different colour, to distinguish commands, screens or functions. Or simply used to create countless colour combinations: a design element making each room unique.

The LEDs are an essential part of One.

In the feedback function, they change colour when a command has been executed: to indicate a light has been switched on, a shutter moved, etc.

With the ECO function, energy saving comes into play: if it is activated, the LEDs switch off after 10 seconds of inactivity.

The light intensity of the LEDs automatically adjusts on the basis of the light level detected in the room: to be visible in a very bright room, and to avoid causing disturbance in softer ambient lighting, for example in bedrooms.

One becomes four.

One manages up to 4 pre-set home automation scenarios. Through the Scenarios function, One further simplifies home management and improves quality of life.
Comfort, wellbeing and security have never been so achievable.

ONE

One, welcome to SimpleHome.

ONE
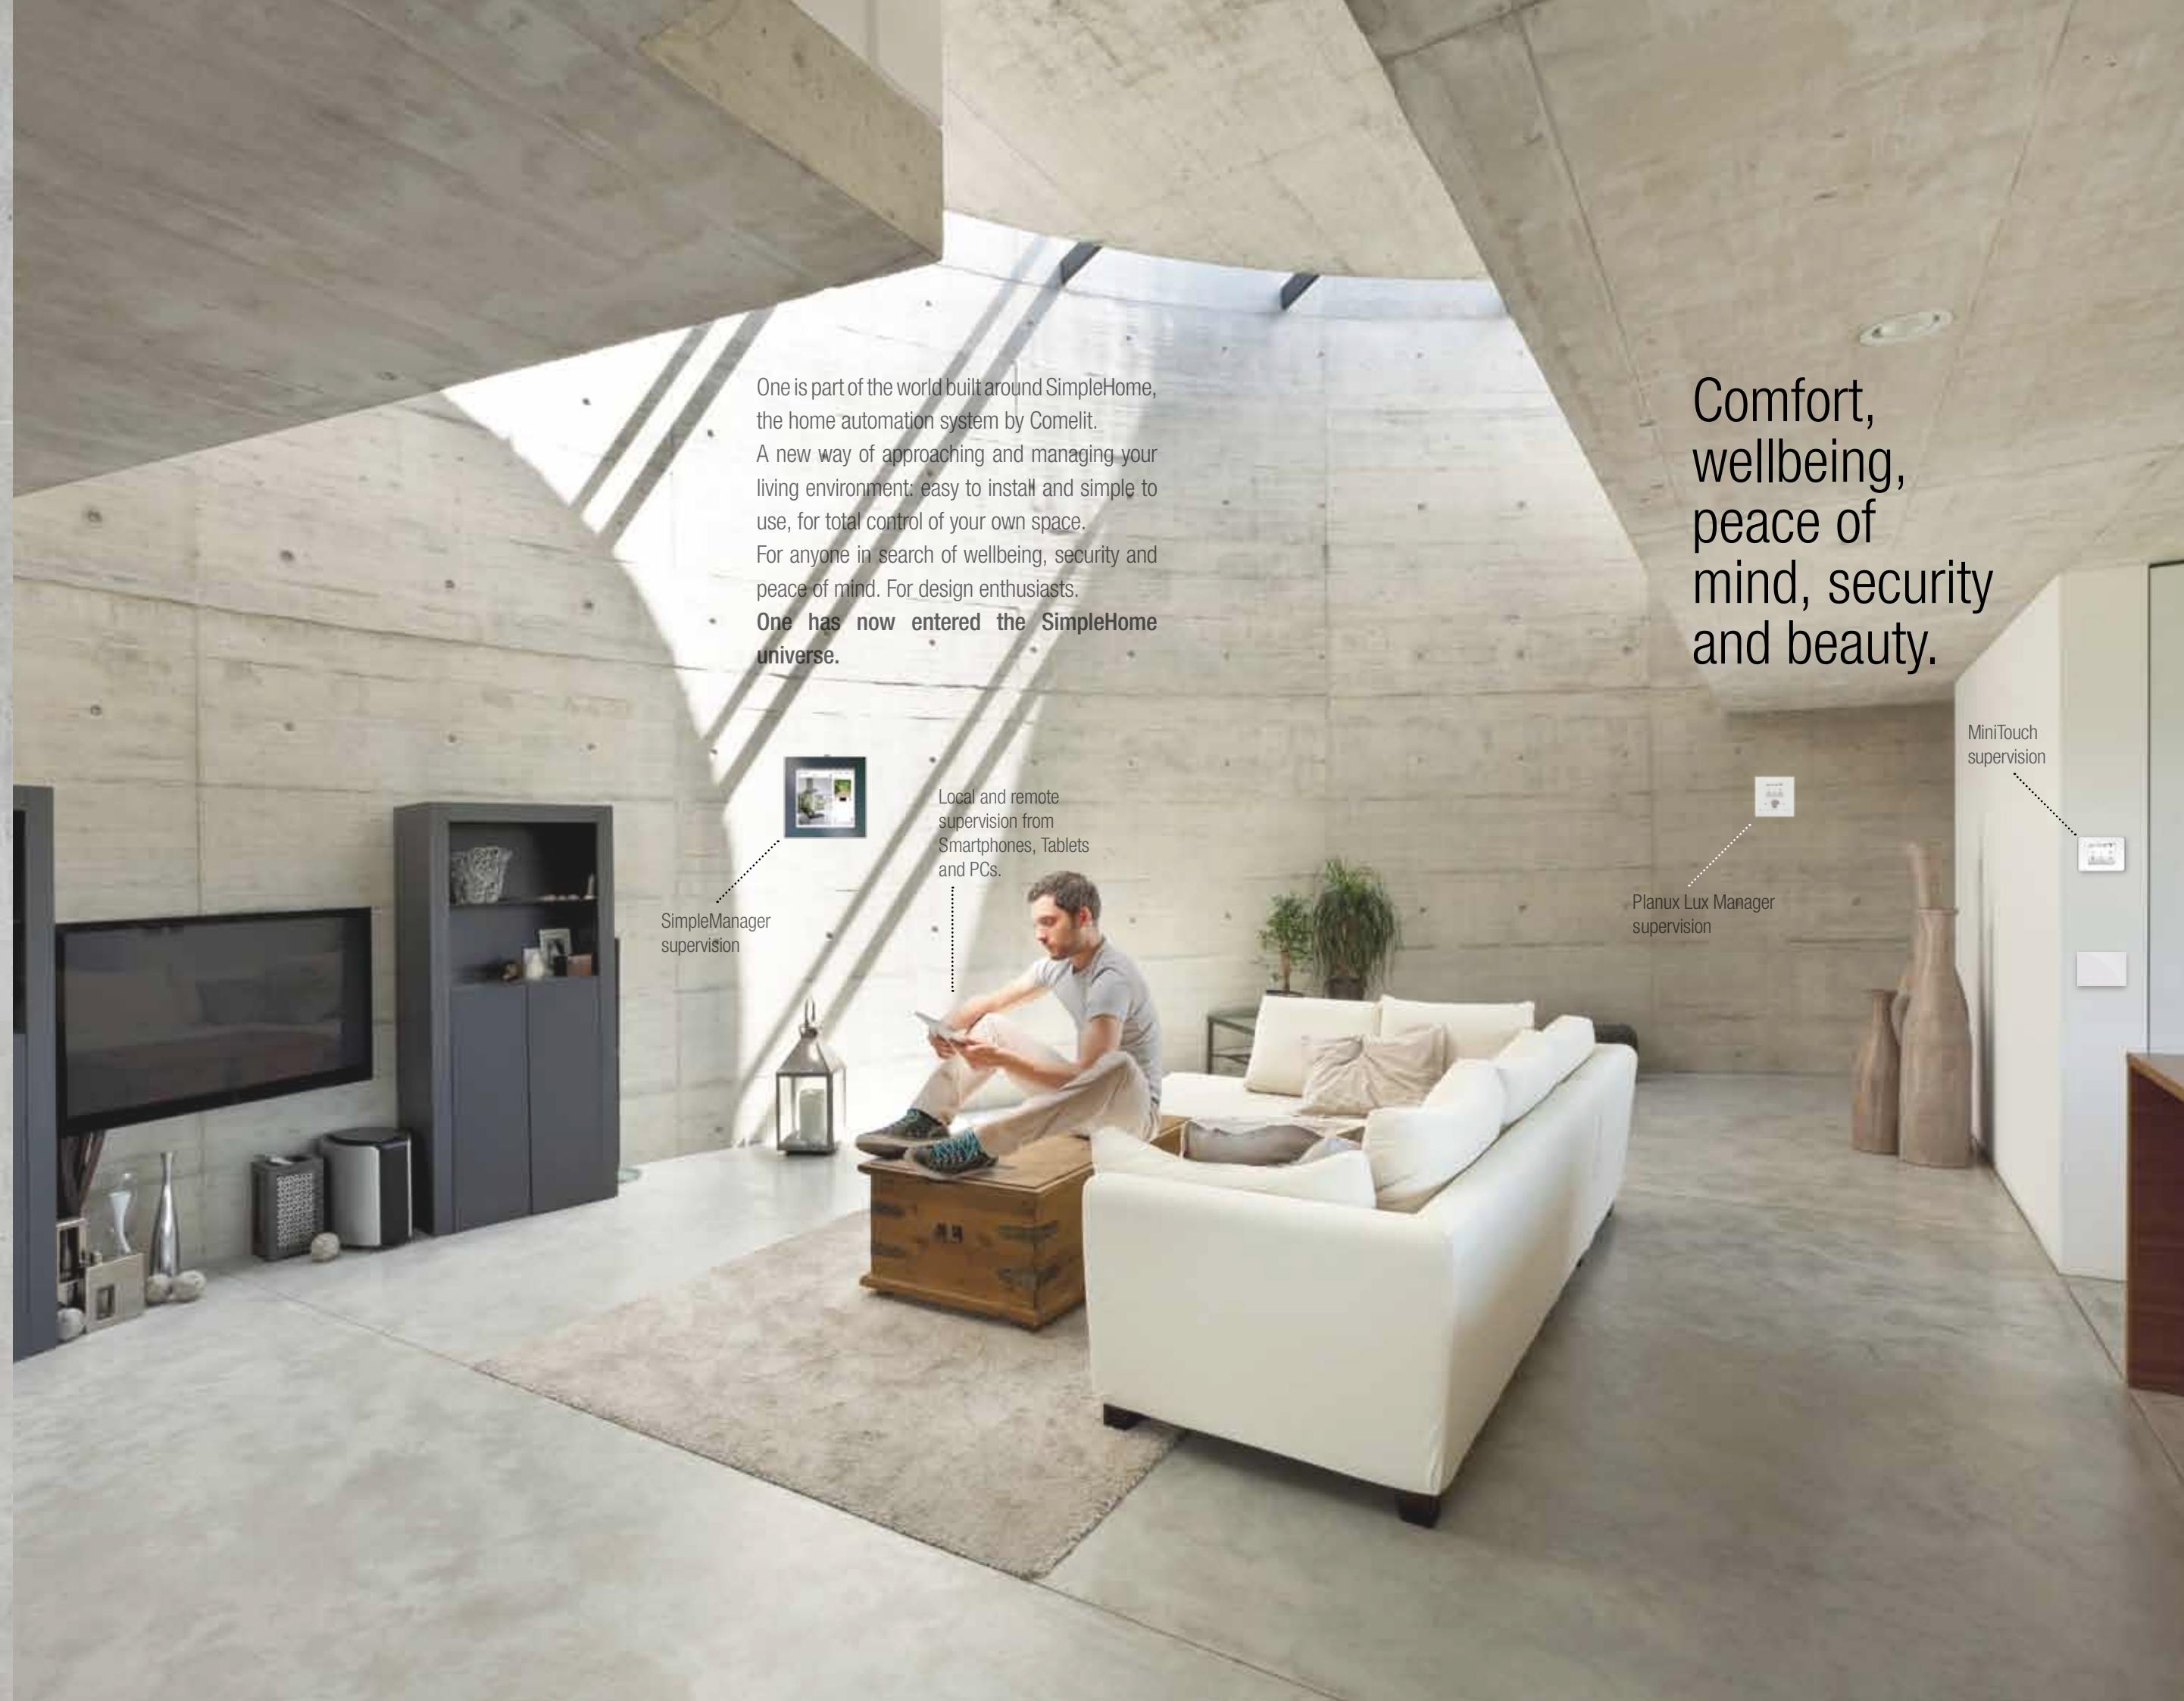

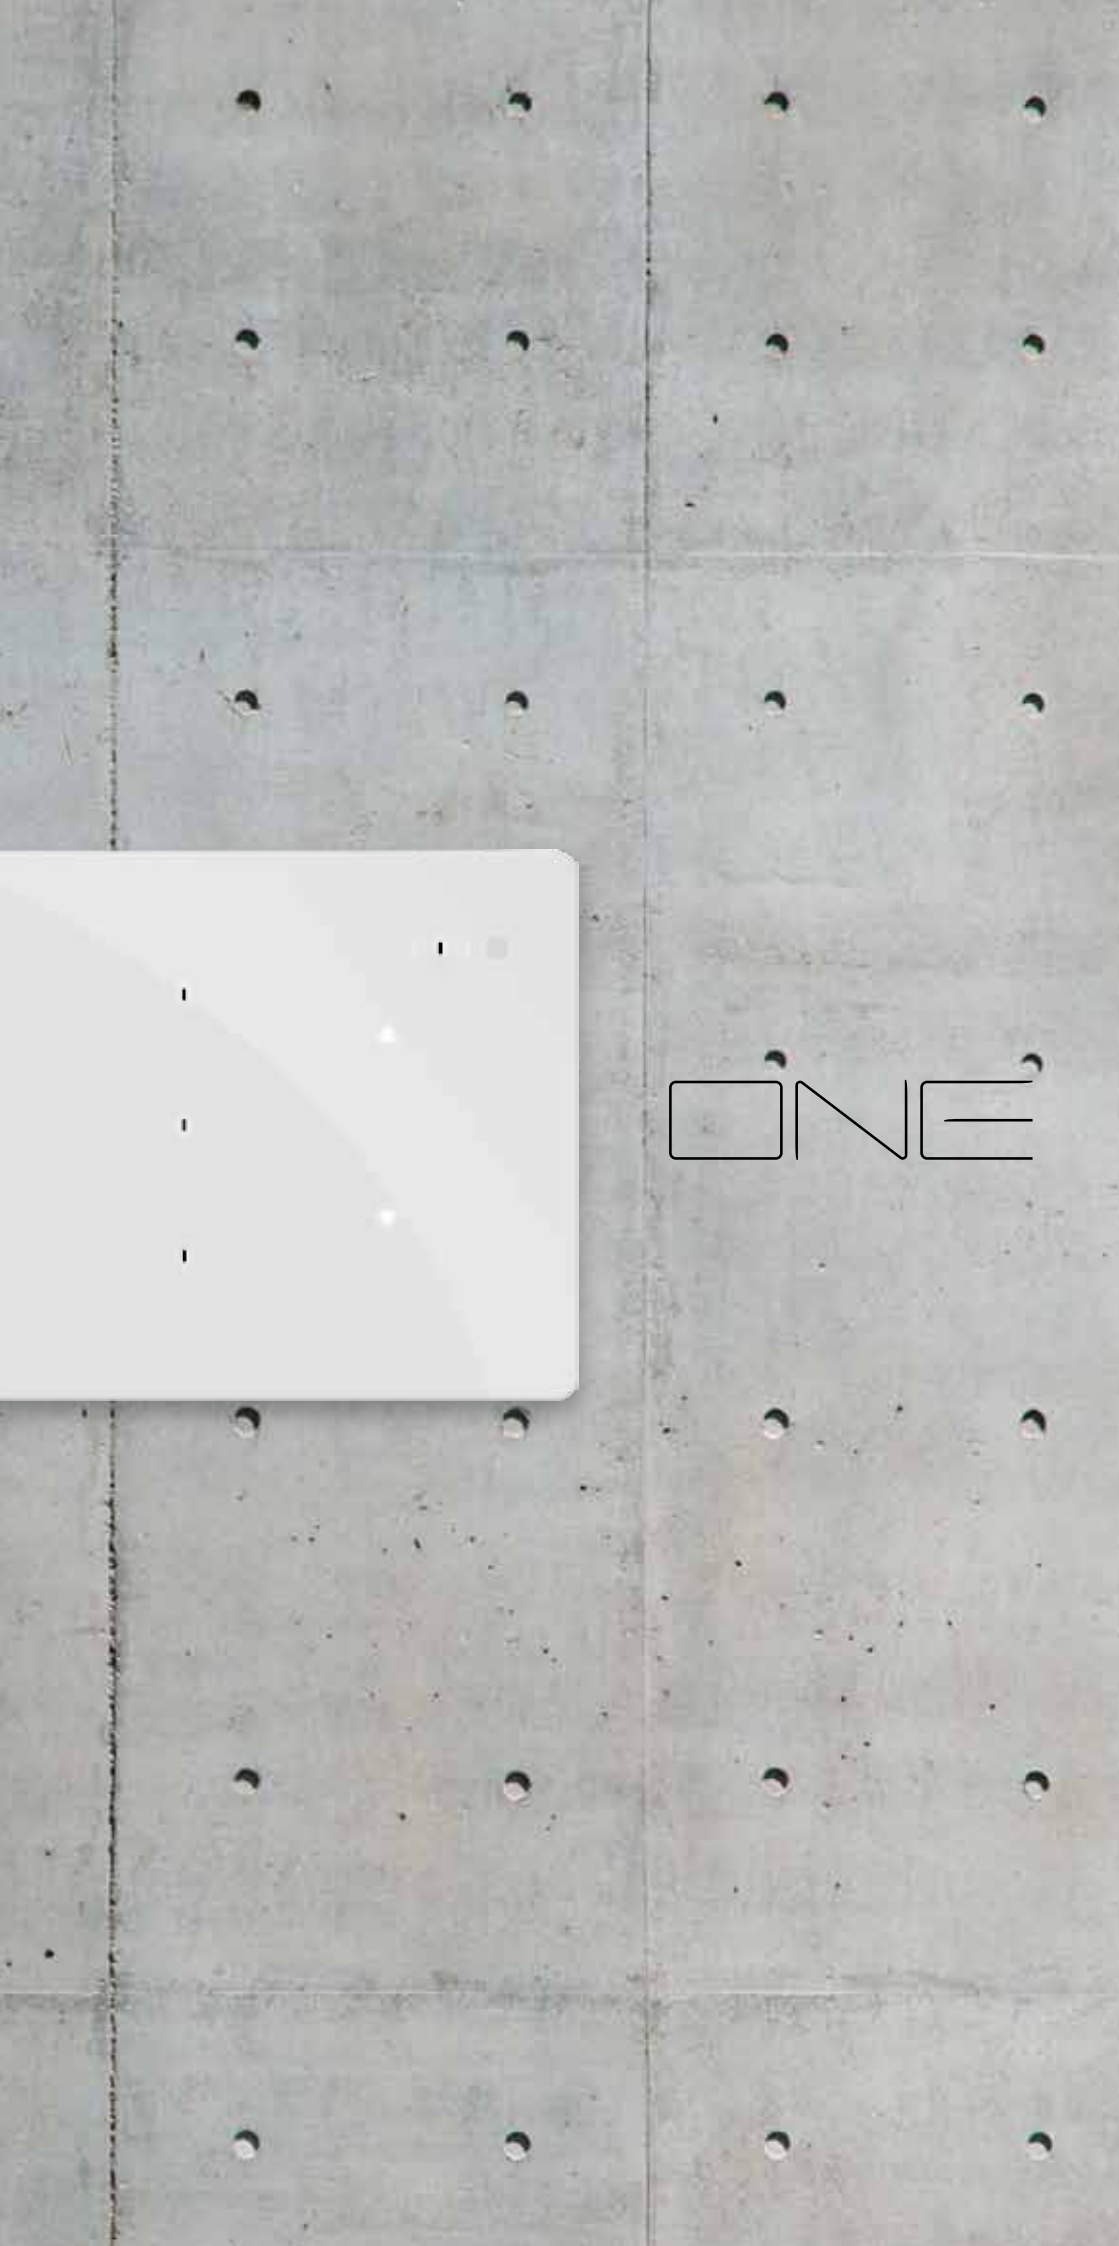

One is part of the world built around SimpleHome, the home automation system by Comelit. A new way of approaching and managing your living environment: easy to install and simple to use, for total control of your own space. For anyone in search of wellbeing, security and peace of mind. For design enthusiasts. **One has now entered the SimpleHome universe.**

Comfort, wellbeing, peace of mind, security and beauty.

Local and remote supervision from Smartphones, Tablets and PCs.
